

SPRING RUNOFF POTENTIAL AS OF MARCH 5, 2013

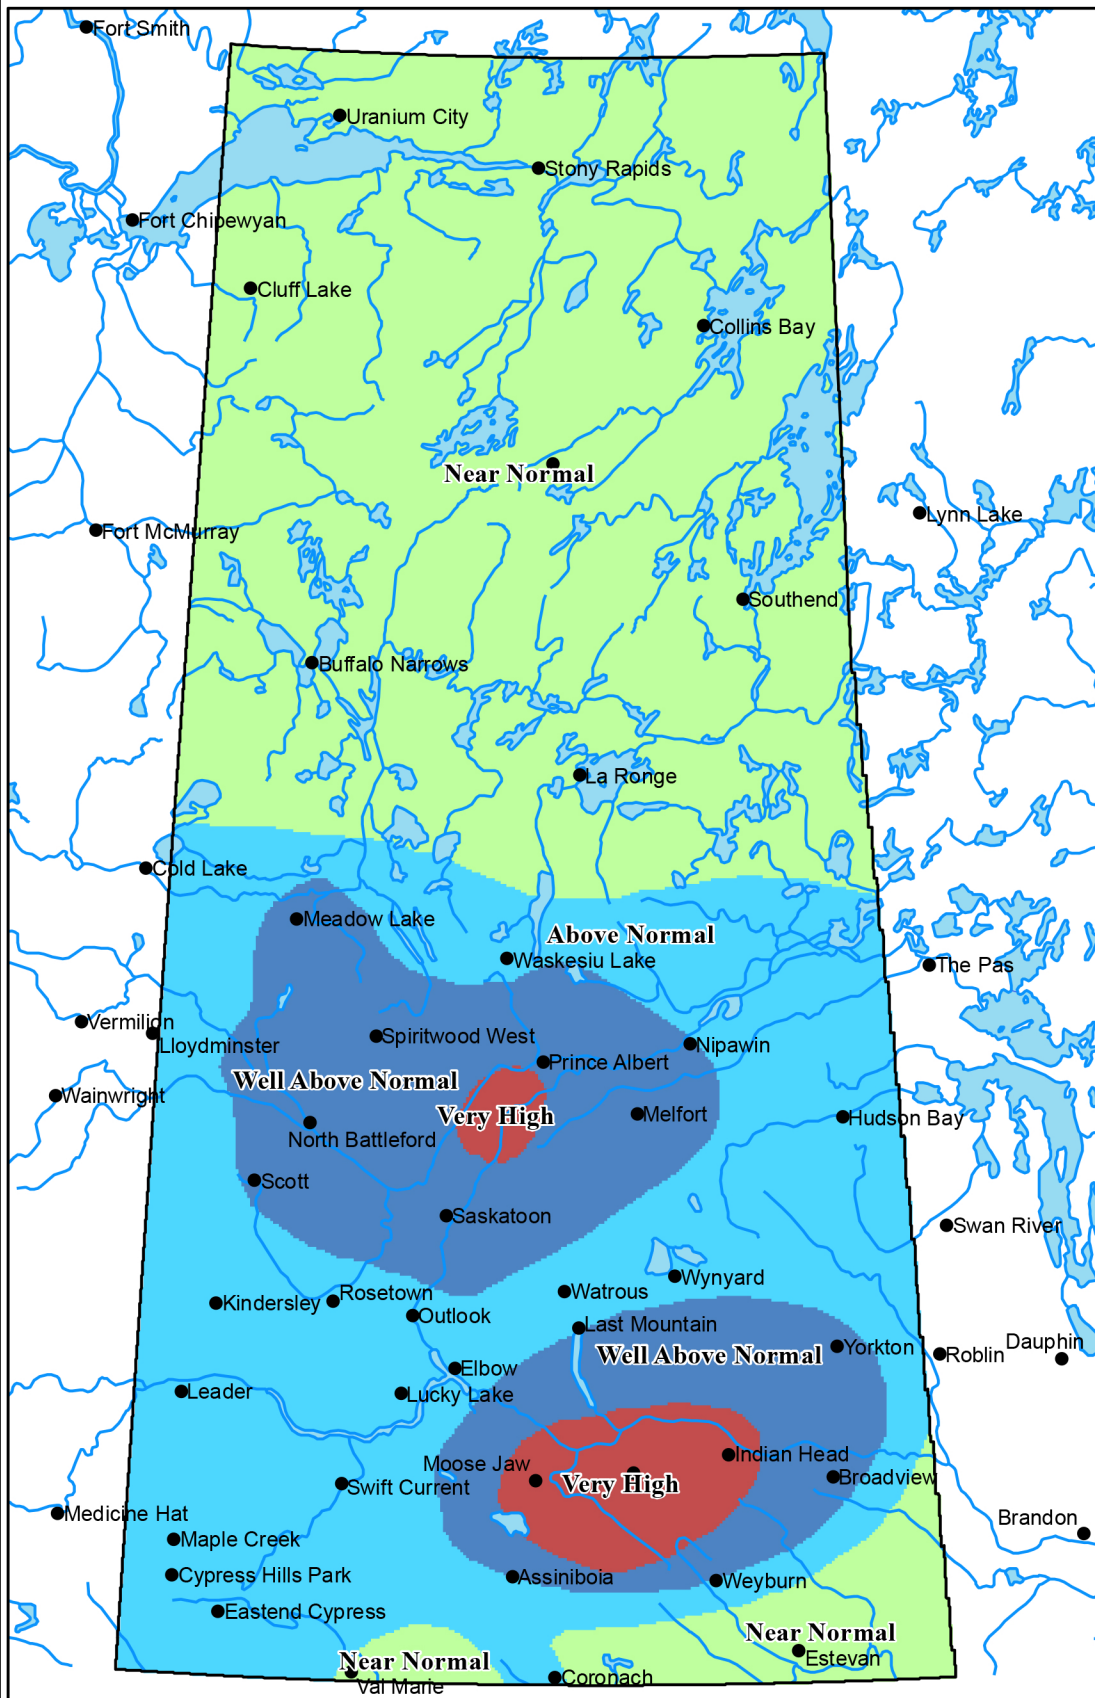

Above normal precipitation prior to runoff and/or a faster than typical rate of melt will result in significantly higher runoff.

In many areas conditions vary considerably over short distances.

Projected runoff is based on sparse, variable and often conflicting snow accumulation estimates.

Runoff boundaries should be considered approximate.

LEGEND

- POTENTIAL RUNOFF**
- Near Normal
Flow primarily in natural channel
($\approx 1:2$ yr event)
 - Above Normal
Natural channel exceeded
in some reaches
($\approx 1:5$ yr event)
 - Well Above Normal
Significant out of channel flow
($\approx 1:10$ yr event)
 - Very High
Flooding is likely
($\geq 1:25$ yr event)
